

Data Sheet TIMax® Mesh-Decor in single glazed profiled glass (VCF)

Date 26.7.2021

TIMax® Mesh-Decor is a slightly translucent decorative insert for ventilated profiled glass facades (VCF, curtain wall) or cold facades. TIMax® Mesh-Decor is available in white.

Ventilated curtain facades (VCF) form a durable weather protection and look architecturally appealing. However, you can usually look through the glass directly on the masonry or thermal insulation. TIMax® Mesh-Decor provides a decorative visual cover that prevents the view of the underlying thermal insulation or the anchoring ground.

The mesh insert is UV-stable, vapor-permeable and insensitive to humidity.
